## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-32, drawn to a reflecting device, classified in class 349, subclass 113.
- II. Claims 33-47, drawn to a method of varying the optical thickness of a reflecting device, classified in class 349, subclass 187.

1. The inventions are distinct, each from the other because:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the reflecting device of the product can be made by a process (using, for example, a computer generated grating as a mask), in which the device can have discrete reflection wavelengths, instead of a continuum of reflection wavelengths.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

2. Group I contains claims directed to the following patentably distinct species of the claimed invention:

A: claims 1-14 and 32 drawn to a reflecting device having electrically controllable, variable reflection (No figure shown). The specifics of the reflection device being: a composition comprising a periodic array of liquid crystal disposed in a polymer matrix'

B: claims 15-30 drawn to a reflecting device having electrically controllable, variable reflection according to Figs.1-6. The specifics of the reflection device being: a holographic polymer dispersed liquid crystal film comprising layers of liquid crystal and polymer matrix.

C: claim 31 drawn to a grating according to Fig. 7.

If Group I is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

3. Group II contains claims directed to the following patentably distinct species of the claimed invention:

A: claims 33-44 drawn to a method of varying the optical thickness of a reflecting device.

B: claims 45-46 drawn to a method of modifying reflection characteristics in an H-PDLC reflecting device.

C: claim 47 drawn to a method of electrically controlling a variable peak wavelength of a grating.

If Group II is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall

be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

4. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
